Comment word CLIMB

The Claude prompt that climbs your pages up Google

Turn Claude into your own SEO agency: every day it checks your website for problems, finds the pages stuck on page 2 of Google, and rewrites them to climb. The full prompt is included, step by step for beginners.

LEVEL	SETUP TIME	COST
Beginner	About 30 minutes	Free tools

You need your own website, free Google Search Console, and Claude. No SEO experience needed.

What this guide will help you do

SEO agencies charge hundreds of dollars a month to do something simple: check your website, find pages that are **almost** on page 1 of Google, and improve them until they get there.

This guide gives you a prompt that makes Claude do that work for you. Every day it reviews your pages, spots what's broken, finds the pages sitting on **page 2**, and rewrites their content so they can climb. You review everything before it goes live.

Be realistic

Nothing can guarantee page 1 on Google, and nobody honest will promise it. This method gives your pages their best chance. You must **review everything Claude writes** before you publish it.

What's inside

1. Why page 2 is the secret
2. What you need
3. Set up Google Search Console
4. Export your data
5. Set up your SEO folder
6. The CLIMB prompt
7. Review and publish
8. Make it a daily routine
9. Track results, fixes, glossary

Why page 2 is the secret

Almost nobody clicks on page 2 of Google. But a page sitting at **position 11–20** is close: Google already thinks it's relevant. It usually needs only a better title, a clearer answer, or a missing section to jump to page 1.

Page 1 (1–10)
Where almost all the clicks go. Protect these pages.

→

Page 2 (11–20)
Your quick wins. This is where CLIMB focuses.

→

Page 3+ (21+)
Needs bigger work. Leave these for later.

What you need

YOU NEED	DETAILS
Your own website	WordPress, Shopify, Wix, Webflow or any other. It should have been live for at least a few weeks.
Google Search Console	Free, from Google. It shows exactly where each page ranks. Step 1 shows how to set it up.
Claude	Best with **Claude Code** (the Code tab in the desktop app, paid plans), because it can visit your pages and keep files. A normal Claude chat also works if you upload the files yourself.

1 Set up Google Search Console

About 10 minutes, then a few days of waiting

1. Go to search.google.com/search-console and sign in with Google.
2. Click **Add property** and enter your website address.
3. Follow Google's steps to **verify** you own it. Most website builders have a simple option for this. If you're stuck, ask Claude: *"How do I verify my WordPress / Shopify / Wix site in Google Search Console?"*
4. Wait a few days. If your site is brand new to Search Console, it needs time to collect data.

2 Export your data

2 minutes

1. In Search Console, open **Performance** → **Search results**.
2. Set the date range to the **last 28 days**, and click the **Average position** box so positions show.
3. Click **Export** (top right) and download it as a **CSV** file. The download includes your top queries and pages.

> **Fresh data, better results**
> Export a new file each time you run CLIMB, so Claude works with your latest positions.

3 Set up your SEO folder

3 minutes

1. Create a folder called `SEO` in Documents, with a folder inside it called `data`.
2. Put your Search Console export in `data`. Unzip it if it downloaded as a ZIP.
3. In the Claude desktop app, open the **Code** tab, start a new session, choose **Local**, and select the `SEO` folder.

4 The CLIMB prompt

The heart of this guide

Paste this whole prompt. Fill in the yellow parts the first time.

COPY THIS PROMPT — CLIMB

```
You are my SEO agency. My website is https://YOURSITE.com
It's about WHAT YOUR SITE IS ABOUT, for WHO YOUR CUSTOMERS ARE.
My Google Search Console export is in the data folder.

PART 1 - HEALTH CHECK
Visit my main pages and list anything broken or weak: missing or
duplicate titles, missing meta descriptions, broken links, very thin
pages, missing headings, slow or very heavy pages. Rank by importance.

PART 2 - FIND PAGE 2
From the Search Console data, find pages with an average position
between 11 and 20 that get impressions. List the top 5 by impressions,
with the search queries they appear for.

PART 3 - CLIMB
For each of those 5 pages:
1. Read the page as it is now.
2. Search the query and look at what the top 3 results cover that
   my page doesn't.
3. Write an improved version: a better title (under 60 characters),
   a meta description (under 155 characters), the answer in the first
   paragraph, any missing sections, a short FAQ, and 2-3 links to my
   other pages.
Keep my voice. Don't invent facts, stats or reviews. Mark anything
I need to check with [CHECK].

PART 4 - REPORT
Save each rewrite as a separate file in a folder called climb/.
Then give me a short report: what's broken, which pages you rewrote and why,
and what I should publish first.

Do NOT change anything on my live website. Everything is a draft for me to review.
```

Why "don't change the live site"?

You stay in control. Claude prepares the work, and you decide what goes live. That's how you avoid mistakes reaching your customers and Google.

5 Review and publish

15–30 minutes

Open the files in the `climb` folder and go through each one with this checklist:

- [ ] Every fact, price and number is correct (search for any `[CHECK]` marks)
- [ ] It sounds like me, not like a robot
- [ ] It answers the search question clearly in the first paragraph
- [ ] No keyword is repeated unnaturally
- [ ] The links go to the right pages

Then copy the new title, description and content into your website editor and publish. Start with the 1–2 pages Claude says are most important.

6 Make it a daily routine

5 minutes a day

- **Every day:** run the health check (Part 1) so you catch broken things fast. If your Claude app has **scheduled tasks**, schedule it for each morning. Otherwise open the session and say *"Run part 1 of CLIMB."*
- **Once or twice a week:** export fresh Search Console data and run the full CLIMB prompt.
- **Give pages time.** After you update a page, wait 2–4 weeks before changing it again. Google needs time to notice.

COPY THIS PROMPT — Follow-up run

```
Run CLIMB again with the new Search Console data in the data folder.
Skip any page I updated in the last 3 weeks (check the climb folders).
Also compare positions with the last run and tell me which pages moved up or down.
```

Track your results

Keep a simple spreadsheet with one row per page you improve:

COLUMN	WHAT TO WRITE
Page	The page address.
Main query	The search it's trying to rank for.
Position before	From Search Console, on the day you updated it.
Date updated	When you published the new version.
Position after 4 weeks	Check Search Console again.

Fixes

PROBLEM	WHAT TO DO
Search Console shows no data	New properties need a few days, and new sites may need weeks of traffic. Keep going with the health check meanwhile.
No pages in positions 11–20	Ask Claude to look at positions 8–30 instead, or pick the pages with the most impressions.
Claude can't open my pages	Some sites block automated visits. Copy the page text into a file in the folder and tell Claude to use that.
The rewrite doesn't sound like me	Put 2–3 of your best pages in the folder and add: "Match the writing style of these pages."
A page dropped after I changed it	Small drops are normal for a week or two. If it's still down after 4 weeks, go back to the old version.

Mini glossary

SEO	Search Engine Optimisation: making your pages show up higher on Google.
Search Console	Google's free tool that shows how your site performs in search.
Impressions	How many times your page appeared in search results.
Average position	Where your page usually ranks. 1 is the top, and 11–20 is page 2.
Meta description	The short text under your title in Google's results.
Internal link	A link from one page on your site to another page on your site.

Small improvements, every day.

That's all an SEO agency really does. Now Claude does the heavy lifting, and you make the final call.
