Comment word FACE OFF

Make Claude and ChatGPT debate for the best answer

A complete beginner's guide to the free Dual Skill: bring ChatGPT into your Claude chat, make them challenge each other's answers, and keep only what survives.

LEVEL	SETUP TIME	SKILL COST
Complete beginner	About 15 minutes	Free

The skill is free. ChatGPT's side runs on an OpenAI account, which costs a few cents per debate (explained inside).

What this guide will help you do

Every AI makes mistakes, and it usually sounds just as confident when it's wrong. The fix is the same one people use: **get a second opinion and make them argue.**

Dual Skill brings ChatGPT into your Claude conversation. When you don't trust an answer, the two AIs pick apart each other's arguments, expose each other's mistakes, and each one has to defend every word it said, until only the strongest answer is left.

What's inside

1. How the debate works
2. What you need
3. Get an OpenAI API key
4. Install the skill
5. Connect your key safely
6. Run your first face-off
7. Read the result
8. When to use it (and when not to)
9. Keep costs under control
10. Fixes, checklist and glossary

How the debate works

You ask your question once. Behind the scenes, this happens:

1. Claude answers You get Claude's first answer, as normal. → **2. ChatGPT attacks** ChatGPT reads it and points out every weak spot. → **3. Claude defends** Claude fixes real mistakes and pushes back on wrong criticism. → **4. Repeat** They go back and forth until they stop finding problems. → **5. Final answer** You get the answer both sides could defend.

Two different AIs, trained by two different companies, tend to make **different** mistakes. So when one checks the other, a lot of errors get caught that either one would miss alone.

What you need

YOU NEED	WHY, AND WHERE TO GET IT
A Claude account	Sign up at claude.ai. Skills use Claude's ability to read files and run small tools, which may need a paid plan depending on your account.
The Claude desktop app ***(recommended)***	From claude.ai/download. The skill has to contact ChatGPT over the internet, which works best from the app's **Code** tab.
An OpenAI API key	This is how the skill talks to ChatGPT. Step 1 shows you how to get one.
A few dollars of OpenAI credit	$5 is plenty to start. Each debate usually costs a few cents.

The Dual Skill link	The link from my reel.

> **ChatGPT Plus is not the same as API credit**
> A ChatGPT Plus subscription only works on the ChatGPT website and app. Tools like this skill use the **OpenAI API**, which is a separate account with its own pay-as-you-go balance, even if you already pay for Plus.

1 Get an OpenAI API key

About 5 minutes

An **API key** is like a password that lets a program use your OpenAI account. Here's how to get one:

1. Go to platform.openai.com and sign up or log in. You can use the same login as ChatGPT.
2. Open **Settings** → **Billing** and add a payment method. Add a small amount of credit, for example **$5**.
3. Open the **API keys** page and click **Create new secret key**. Give it a name like `Dual Skill`.
4. **Copy the key straight away** and keep it somewhere safe for the next few minutes. It starts with `sk-`. OpenAI shows it only once.

> **Treat your key like a bank card**
> Anyone with your key can spend your OpenAI credit. Never post it online, never put it in a screenshot, and never send it in a DM. If you think it leaked, delete it on the API keys page and create a new one.

2 Install the skill

About 3 minutes

1. Open the **Claude desktop app** and click the **Code** tab.
2. Start a new session. Choose **Local** and pick a folder, for example a new folder called `Face Off` in Documents.
3. Paste the prompt below with the Dual Skill link, and click **Allow** if Claude asks for permission to download files.

COPY THIS PROMPT — Install

```
Install skill: PASTE THE DUAL SKILL LINK HERE

Install it for my user account so it works in every project. Then explain in simple
words:
1. What the skill needs from me to work (for example an API key)
2. Where it expects that key to be stored
Don't ask me to paste the key into this chat.
```

3 Connect your key safely

About 3 minutes

The skill needs your key, but it's safer **not** to paste it into the chat. Instead, ask Claude to prepare the place where the key goes, and paste the key in yourself.

COPY THIS PROMPT — Set up the key

```
Set up my OpenAI API key for the Dual Skill the safe way:
- Create the settings file (or environment variable) the skill reads from, with a placeholder where the key goes
- Tell me exactly which file to open and which line to replace with my key
- Make sure the file isn't shared or uploaded anywhere
After I've pasted it, test the connection with one tiny request and tell me if it worked.
```

Follow Claude's instructions, open the file it names, replace the placeholder with your `sk-…` key, save, and tell Claude *"Done, test it."*

Using Claude on the website instead?

If you installed the skill in Claude's settings rather than the Code tab, read the skill's own setup instructions (the README on its link page). They explain where the key goes for that setup.

Run your first face-off

4 Ask, then call in ChatGPT

2 minutes

Start a **new chat** so the skill is loaded. Ask your question normally first. If you're not sure about Claude's answer, start the debate:

COPY THIS PROMPT — Start the debate

```
Use the Dual Skill. I'm not sure your last answer is right.
Bring in ChatGPT and debate it:
- ChatGPT should attack your answer and point out every weakness
- You defend every point, admit real mistakes and fix them
- Keep going until neither of you can find a real problem (max 4 rounds)

Then give me:
1. The final answer
2. What changed from your first answer, and why
3. Anything you two still disagree on
```

Or do it all in one go with a new question:

COPY THIS PROMPT — One-shot face-off

```
Use the Dual Skill for this question: YOUR QUESTION HERE

Both of you answer, then challenge each other's answers until only the best answer is
left. Show me a short summary of each round, then the final answer in simple words.
```

5 Read the result

The part most people skip

- **Read "what changed".** That's where the mistakes were. If nothing changed, that's a good sign the first answer was solid.
- **Look at the disagreements.** If they still disagree on something, that part is genuinely uncertain. Check it yourself or ask an expert.
- **Agreement doesn't mean it's true.** Two AIs can agree and both be wrong, especially about very recent events or exact numbers. For anything important (health, money, legal), check a trusted source too.

When to use it (and when not to)

Facts and explanations
"Is this true?", "Explain how X works". The second AI catches made-up facts.

Code
One writes it, the other hunts for bugs and edge cases.

Big decisions
Business plans, pricing, strategy. You get the strongest arguments on both sides.

Important writing
Emails, proposals, captions. Each side critiques clarity and tone.

Skip it for simple things like "translate this sentence" or "write a quick caption". A debate takes longer and costs a little each time, so save it for answers that matter.

Keep costs under control

- OpenAI charges per **token** (roughly ¾ of a word). A normal debate usually costs **a few cents**. Very long documents cost more.
- On OpenAI's **Billing** page you can set a **monthly budget limit** so you can never spend more than you planned.
- Keep debates to **3–4 rounds**. After that, answers rarely improve.
- Check your **Usage** page after your first few debates to see what they really cost.

Fixes

WHAT YOU SEE	WHAT IT MEANS AND WHAT TO DO
"401", "invalid API key" or "unauthorized"	The key is wrong or was pasted with extra spaces. Create a new key and paste it again carefully.
"429", "insufficient quota" or "rate limit"	Your OpenAI balance is empty, or you sent too many requests too fast. Add credit on the Billing page, or wait a minute.
"Model not found"	The skill asked for a ChatGPT model your account can't use. Ask Claude: "Switch the Dual Skill to a model my OpenAI account has access to."
Claude doesn't use the skill	Start a new chat and name it directly: "Use the Dual Skill to...". If it still isn't found, repeat Step 2.
The debate never ends or goes off topic	Set a limit in your prompt: "maximum 3 rounds", and restate the exact question.
Can't connect at all	Use the Code tab of the desktop app. The skill needs to reach OpenAI over the internet.

Your checklist

- [ ] I have an OpenAI account with a payment method and a small amount of credit
- [ ] I set a monthly budget limit on OpenAI
- [ ] I created an API key and kept it private
- [ ] The Dual Skill is installed
- [ ] My key is saved in the settings file (not pasted in the chat) and the test worked
- [ ] I ran my first face-off and read what changed and what they disagree on

Mini glossary

API	A way for one program to talk to another. Here, it's how Claude's skill talks to ChatGPT.
API key	A secret password that lets a program use your OpenAI account and credit.
Token	A small piece of text (about ¾ of a word). AI usage is priced per token.
Model	A specific version of an AI, like a specific ChatGPT model.
Skill	A set of expert instructions (and sometimes small tools) that Claude follows for a specific job.

Two brains are better than one.

Next time an answer really matters, don't settle for the first one. Make them fight for it.
