The Parasite SEO playbook

How to show up on the first page of Google, and get mentioned by ChatGPT, without owning a website, by publishing on sites they already trust. Five methods, step by step, for complete beginners.

LEVEL	TIME	COST
Complete beginner	A 14-day plan	Free

Every platform in this guide is free to use. No website, no coding, no ads.

What this guide will help you do

A brand-new website can take months before Google trusts it enough to show it on page one. But Google **already** trusts sites like LinkedIn, Reddit and Zenodo, and ChatGPT reads and quotes them all the time.

Parasite SEO means publishing your content *on those trusted sites*, so it borrows their trust. For searches with little competition, a good post can reach the top within a couple of weeks. And because AI assistants read these sites too, your answers can start appearing in ChatGPT.

What's inside

1. The idea in plain English
2. The golden rule
3. Step 0: Find your 20 questions
4. Method 1: Write about 2027 now
5. Method 2: Research on Zenodo
6. Method 3: Short LinkedIn articles
7. Method 4: 20 Gamma slide decks
8. Method 5: Helpful Reddit answers
9. Your 14-day plan
10. Tracking results, fixes, glossary

The idea in plain English

Someone searches
"best budgeting apps 2027" on Google, or asks ChatGPT.

→

Google picks trusted pages
It prefers big, trusted sites, especially when few good answers exist.

→

Your post is there
Because you published the best answer on a site Google trusts.

→

They find you
Your post links to your Instagram, product or page.

You're not tricking anyone. You're putting a genuinely useful answer in the places where people (and AI) already look.

The golden rule: be useful, never spammy

Every one of these sites removes spam, and some ban accounts for it. Each post must **actually answer the question** better than what's already there. Follow each site's rules, and always be honest when you're promoting your own product. Done this way, it works long term. Done the spammy way, it gets deleted.

0 Find your 20 questions

About 30 minutes · do this first

Every method in this guide starts from one thing: **the exact questions your customers type into Google.** Build a list of 20 before you write anything.

Where to find them (all free)

- **Google autocomplete:** start typing your topic in Google and write down the suggestions.
- **"People also ask":** the box of questions in Google's results. Click a few and more appear.
- **Reddit:** search your topic and note the questions people keep asking.
- **Your own DMs and comments:** the questions your followers already ask you.
- **Ask an AI** to brainstorm with you:

COPY THIS PROMPT — Claude or ChatGPT

```
I sell / teach: YOUR PRODUCT OR TOPIC
My customers are: WHO THEY ARE

Give me 40 specific questions these people type into Google. Mix:
- "how to" questions
- "best ___ for ___" questions
- comparisons ("X vs Y")
- questions that include a year, like "2027"
Mark the 20 that are most specific (long questions usually have less competition).
```

Specific beats popular

"Marketing tips" is impossible to rank for. "How to get first 10 customers for a home bakery on Instagram" is easy, and the person searching it is much closer to buying.

Save your 20 questions in a spreadsheet (Google Sheets is fine). You'll use it to track everything.

Pick one to start, then add more

You don't have to do all five at once. Start with Method 3 (LinkedIn) or Method 5 (Reddit) because they're the fastest, then add the others week by week.

1 Write about 2027 now

Get there before everyone else

People search with the year: "best laptops for students **2027**". Most creators only write those posts once the year starts. If you publish *now*, there's almost no competition, so the first decent page often takes the top spot and keeps it as the searches grow.

1. Pick 3–5 of your questions and add the coming year: *"best ___ in 2027"*, *"how to ___ in 2027"*.
2. Write a genuinely helpful post. Put the year in the **title** and the **first sentence**.
3. Publish it on a trusted platform: **LinkedIn articles**, **Medium** or **Substack** (all free).
4. Update it a few times a year so it stays the best answer.

COPY THIS PROMPT — 2027 post

```
Write a helpful article titled "Best ___ for ___ in 2027".
- Answer the question in the first 2 sentences
- Then give a clear, numbered list with a short reason for each
- Use simple English and short paragraphs
- End with one line inviting readers to follow me on Instagram @nour_abou_zour / check my product
Only include things that are true and current. Mark anything I should double-check.
```

2 Publish research on Zenodo

The one AI loves to quote

Zenodo is a free research library run by CERN (the European science lab). Anything published there gets a permanent DOI, a kind of official ID used for research. AI tools like ChatGPT treat it as a reliable source and quote it often.

What to publish

Real, small research you did yourself. For example: a survey of 50 of your followers, results from testing 10 tools, a case study of your own numbers, or a useful dataset. It doesn't need to be academic. It needs to be **real and useful**.

How to publish

1. Create a free account at zenodo.org (you can sign in with GitHub or ORCID, or use email).
2. Turn your research into a short PDF report: a title that matches a search question, a 3-line summary at the top, your method, results and conclusion.
3. Click **New upload**, add the PDF, choose a type such as *Publication → Report*, and fill in the title, your name, a clear description and keywords.
4. Add a link to your page or Instagram in the description, then click **Publish**.

> **It's permanent**
> Once published, a Zenodo record can't simply be deleted. You can only add new versions. Check everything before you click Publish, and only upload genuine research, never adverts.

3 Short LinkedIn articles

Under 330 words, answer in the first line

LinkedIn articles rank well on Google, and AI assistants like answers that come **first**, with no long intro. So keep each article short and direct.

1. On LinkedIn, click **Write article** (on the home page, near where you'd start a post).
2. Make the **headline** one of your exact questions.
3. Write the **answer in the very first sentence**. Then explain it in short sections. Stay **under 330 words**.
4. Add one link at the end to your Instagram, product or page, then publish.

5. Do one article per question. Aim for 2–3 a week.

COPY THIS PROMPT — LinkedIn article

```
Write a LinkedIn article answering: "YOUR QUESTION"
Rules:
- The first sentence must directly answer the question
- Under 330 words in total
- 3 short sections with clear subheadings
- Simple English, no buzzwords
- Last line: a short invitation to my Instagram @nour_abou_zour
```

4 20 Gamma slide decks

One deck for each question

Gamma is a free AI tool that makes good-looking presentations in a minute. Public Gamma pages can show up in Google too, so one deck per question means **20 more chances** to be found.

1. Sign up free at gamma.app.
2. Create a new presentation and give it one question as the topic. Make the **title the exact question**.
3. Edit the slides so the answer is clear and correct. Add a final slide with a link to your Instagram, product or page.
4. Use **Share** to make it public (anyone with the link, or publish to the web).
5. Repeat for all 20 questions. Once you get used to it, each deck takes about 10 minutes.

5 Helpful Reddit answers

Google and ChatGPT both read Reddit

Google shows Reddit threads for huge numbers of searches, and AI tools quote Reddit answers constantly. A genuinely helpful answer in the right thread can bring visitors for years.

1. Find threads by searching Google for: `site:reddit.com your question`
2. Open threads that rank well, and read the subreddit's **rules** first. Many limit self-promotion.
3. Write the most helpful answer in the thread: specific steps, real experience, no sales talk.
4. If you mention your product, **say it's yours**, for example: *"Full disclosure: I made this tool."* Honesty builds trust and keeps you from getting banned.
5. Answer more questions than you promote. A good habit is roughly 9 helpful answers for every 1 that mentions your product.

New account?

Brand-new Reddit accounts often can't post or get filtered. Spend a few days commenting helpfully in your topic's communities before you share any links.

Your 14-day plan

DAYS	WHAT TO DO
Day 1	Step 0: build your list of 20 questions and set up your tracking spreadsheet.
Days 2–3	Method 5: create or warm up your Reddit account and answer 5 questions helpfully (no links yet).
Days 3–6	Method 3: publish 3 short LinkedIn articles, one per question.
Days 5–7	Method 1: publish 2 "2027" articles on LinkedIn or Medium.
Days 7–10	Method 4: make your first 10 Gamma decks and publish them.
Days 10–12	Method 2: run a small survey or test, and publish the report on Zenodo.
Days 12–14	Finish the remaining Gamma decks, answer more Reddit threads, then check your results.

Track your results

Add these columns to your spreadsheet and update them every week:

COLUMN	HOW TO FILL IT
Question	The exact search question.
Where & link	Which platform you published on, and the link.
Date published	So you know how long it took.
Google position	Search the question in a **private / incognito window** (so your history doesn't change results) and note where you appear.
Shows in AI?	Ask ChatGPT or Perplexity the question and see if your post is mentioned or linked.
Views / clicks	Most platforms show views on your post's stats.

Be patient and keep going

Results depend on how competitive each question is. Some posts rank in days, some take weeks, and some never do. That's why you publish many. Double down on the questions and platforms that work for you.

Fixes

PROBLEM	WHAT TO DO
My post doesn't show up on Google at all	Give it 1–2 weeks to be found. Check the title is the exact question. Share it once on your socials so it gets its first visits.
I'm on page 2 or 3	Improve the post: answer more directly in the first line, add a missing step or example, then update it.
Reddit removed my answer	Read that subreddit's rules again. Usually it's a link or self-promotion rule. Answer without the link, or with clear disclosure where it's allowed.
Nobody clicks my link	Make the ending more specific: "Get the free checklist on my Instagram" works better than "follow me".
ChatGPT doesn't mention me	AI assistants update what they know over time. Keep publishing clear, factual answers on trusted sites, especially Zenodo and Reddit.

Your checklist

- [ ] I have a list of 20 specific questions my customers search
- [ ] I set up a tracking spreadsheet
- [ ] I published at least 3 short LinkedIn articles (answer in the first line, under 330 words)
- [ ] I published at least 2 "2027" articles
- [ ] I published my Gamma decks, one per question, each linking to me
- [ ] I published one genuine piece of research on Zenodo
- [ ] I answered Reddit threads helpfully and disclosed my product when I mentioned it
- [ ] I checked my Google positions in incognito and asked ChatGPT my questions

Mini glossary

SEO	Search Engine Optimisation: getting your content to show up higher on Google.
Parasite SEO	Publishing on big, trusted websites so your content borrows their reputation on Google.
Keyword / search query	The words someone types into Google.
Ranking	Your position in Google's results (#1 is the top).
Page one	The first page of Google results, usually the top 10. Where almost all the clicks go.
DOI	A permanent ID for a piece of research. Zenodo gives you one for free.

You don’t need a website to be found.

You need the best answer, in the places people already look. Publish one useful post today.
